Proudly Serving America's Schools

Introducing

Version 5 of The Surfside Lighthouse™

The screenshot shows the 'Student List' application window. At the top, there are menu options: '+ New Student', '- Delete Student', 'Find', 'Print', and 'Print Preview'. Below this, the current class is identified as 'Class: 2007 (age 23)' and the selected student is '- Fisks, Adam Jr. -' (Male). A navigation pane on the left lists various data categories: General, Info, Demographics, Contact, User Fields, Enrollment, Programs, Language/Status, Testing, and Transportation. The main content area displays the student's details: Name (Fisks, Adam Jr.), Class (2007), Gender (Male), Age (23 years old), Birthdate (07/05/1984), and Status (Inactive but enrolled). A photograph of the student is shown. Contact information includes the address (18 Sentry Circle, Yarmouth Port, MA 02675), phone numbers (399-0909, 399-2323, 434-3233), and emergency contacts (399-3354 for doctor, 399-2513 for mother). A 'Special Instructions' section contains a red warning: 'Adam is not to be released to the care of his father - a restraining order has been issued'. A 'Medical (allergies and releases)' section is also present but empty. At the bottom left, it indicates '8 students' are in the list.

The Best Administrative Software Gets Better!

We are proud to announce Version 5 of *Surfside Lighthouse*.

Lighthouse continues to set the standard for affordable, easy-to-use student information systems. Version 5 includes many features requested by users over the past year.

The features described in this flyer reflect the highlights of what we have implemented in V5. Additional features will likely be added during the life of this version – and will be available by free download to V5 users as they become available.

Improved "Student List" System

The demographic data managed by the "student list" forms was reorganized for easier access to the increasing amount of data schools track with *Lighthouse*

This new layout makes it much easier for users to find the data they need quickly. Rather than scrolling through a densely-packed "one for all" screen, Version 5 users can click right to the data category they need.

New! Student Health Records System Health Data Tracking and More!

Version 5 introduces to *Lighthouse* users a comprehensive health records management system. Health records are accessed as another tab on the student list screen, with unique password settings to limit who can see health data when your database is secured.

Highlights of the health records section include:

- Immunization tracking
- Medical-related contact information
- Allergies
- Medical conditions/injuries
- Nurse visit “contact tracker” similar to what is now available for discipline and guidance.
- Medication listings
- Reports related to health data

Test Score Tracking System

We have implemented a system for tracking student test scores in Version 5. Highlights of this function include:

- Tracking of SAT and ACT scores
- Scores for standardized tests
- Local skills testing data that your school may be required to track
- Create and track any other scoring data that your school wishes to maintain
- Select which scores you wish to display on student transcripts

Improved Preference Controls

The preferences section of *Lighthouse* was upgraded to include much of the information that Version 4 had distributed among various sub-menus such as schedule parameters...etc. This makes it much easier for you to find quickly whichever setting you need to change.

New! Field Manager Function

A “field manager” tool replaces the old “user defined fields list”. It enables the user to define and edit multiple properties for *all* demographic fields – both system-defined and user-defined fields.

One of the many properties the user will be able to define is which demographic fields can and cannot be viewed by the teacher client.

*If you purchased Surfside Lighthouse Version 4 after January 1, 2007 your upgrade to Version 5 is **FREE!***

Be sure to check the with us to see if your school has earned a “customer loyalty” incentive on this upgrade.
